

ABSTRACT OF DISCLOSURE

A packet spread-spectrum transmitter for encoding and transmitting data with a spread-spectrum packet-switched system. An encoder encodes data to be transmitted. A demultiplexer demultiplexes the encoded data into sub-data-sequence signals. A plurality of product devices multiply each sub-data-sequence signal by a respective chip-sequence signal to generate a plurality of spread-spectrum channels. A combiner combines the plurality of spread-spectrum channels as a multichannel spread-spectrum signal. The multichannel spread-spectrum signal is concatenated with a header by a header device to output a packet-spread-spectrum signal which is transmitted over radio waves to a packet receiver.
